AWAKENING OF THE SENSES

CHROMOTHERAPY

A spectrum of 6 colours is at your disposal to create a relaxing getaway.

Enjoy the health benefits of colours, or simply relish a soothing colourful atmosphere. The light is pleasantly spread out through the LED lighting, the spotlight and the light fountain.

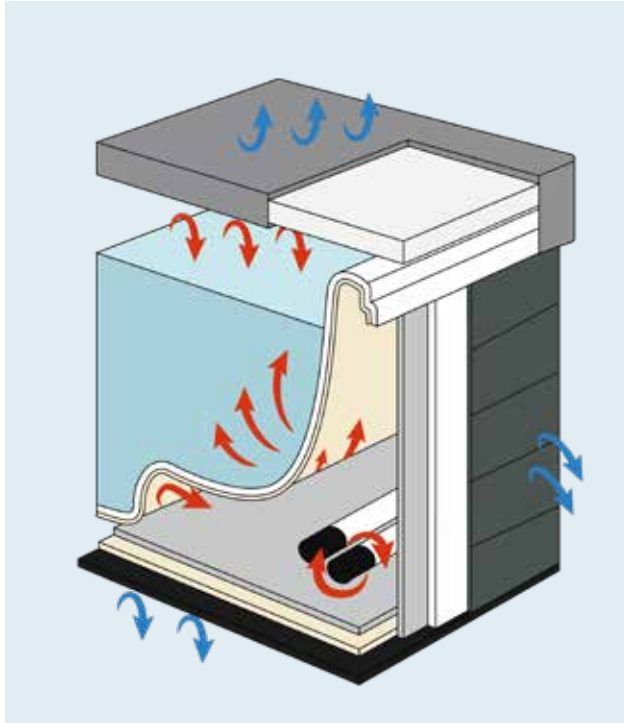

AROMATHERAPY

Discover the intoxicating power of fragrances in the ambient atmosphere of your spa thanks to the integrated device.

Whether relaxing, energizing, vegetal or sweet, you can choose the right scent for the desired effect during your spa session.

THERMAL AND ACOUSTIC COMFORT

The *Energy Smart Plus* quadruple insulated system offers performance for energy savings.

- 1 - The insulation of the ABS base of the spa prevents energy loss through the floor and dampness.
- 2 - The infrared reflector fitted to the panels retransmits the heat produced by the inner fittings into the water.
- 3 - The use of closed cell foam on the back of the enclosure panels insulates the sides of the spa from cold and dampness.
- 4 - Polyurethane foam flocking reduces heat loss through the shell.

Additional product bonus: this system makes your spa particularly quiet to intensify your relaxation.

The thick grey insulating cover prevents evaporation and thus provides perfect protection for your spa, whether it is used indoors or outdoors.

PREMIUM QUALITY MATERIALS

CASING

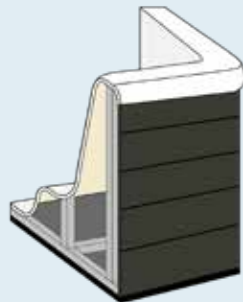

The surrounding panels are easy to maintain.

The ribbed wood effect, the grey colour and the stainless steel caps reveal the contemporary design of our NEPHEA SPA PREMIUM range.

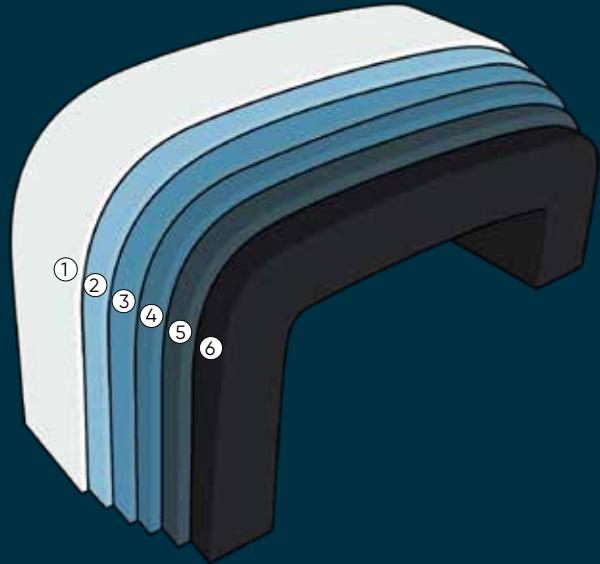

STRUCTURE

Our Premium spas are equipped with a stainless steel frame for a longer lifespan. This light and strong structure strengthens the shell and supports the mechanical stresses.

THERMOFORMED LAMINATED ACRYLIC SHELL

6 layers make up our shells, for an optimal reinforcement:

1. Premium acrylic sheet of great thickness from the American manufacturer Aristech.
2. Hydrophobic vinyl ester bonding resin applied manually for greater precision.
3. Spraying of a layer of fibreglass and vinylester.
4. Spraying of the polyester resistance layer fibreglass and marine grade resin.
5. Spraying a second layer of polyester.
6. Flocking of insulating and water resistant foam.

TRIPLE PERFORMANCE WATER TREATMENT

The combination of the cartridge filtration, the ozone and UV lamp treatments helps to keep your spa water perfectly healthy and clear.

In addition to its high efficiency, this solution reduces the use of water treatment products thereby reducing maintenance costs.

Programmable according to your usage habits, this triple performance water treatment is a valuable asset for the daily use of your spa.
